

ATTACKIQ ENTERPRISE

Comprehensive Breach and Attack Simulation

AttackIQ Enterprise is a comprehensive breach and attack simulation platform that provides maximum flexibility and customization in your testing with on-demand support.

The need for continuous security validation.

Every organization has best in class security products in place. The problem is that they routinely fail. In fact, more than 70 percent of organizations report that at least a quarter of their security controls aren't working, while endpoint detection and response stops the top seven adversary techniques only 39% of the time.

Constantly evolving threats and security tool sprawl make it challenging for most organizations to keep their defenses current. At the same time, manual testing – like pentesting and red teaming – is expensive and scales poorly as most organizations lack the right expertise and time to do it continuously. Ad-hoc test results can be confusing to interpret, difficult to translate into action, and typically result in only temporary improvements in an organization's security posture.

Introducing AttackIQ Enterprise

AttackIQ Enterprise combines the power of AttackIQ's breach and attack simulation platform with the benefits of world class research and professional support every step of the way. It provides flexibility and customization, enabling customers to build and execute the testing to fit their specific needs.

HIGHLIGHTS

Fully Customizable Testing

Test continuously with both on-demand and fully automated testing.

Test at Scale, in Production

Testing that is safe, realistic, and can be executed seamlessly and at scale over large enterprise environments.

MITRE ATT&CK Aligned

Close product alignment with MITRE ATT&CK means unparalleled emulation realism and results that are actionable, easy to understand, and aligned at every step of the way with industry best practices

Expert Consulting

On-demand access to AttackIQ's experienced team of security operations consultants and adversary researchers to build your testing strategy and implement best practices.

Detailed Reporting

Detailed metrics into security control performance with actionable mitigation guidance to close gaps quickly and improve performance.

Detection Engineering

Native integration with your security products to enable you to continuously validate and refine security control detections with results from real-world attack scenarios.

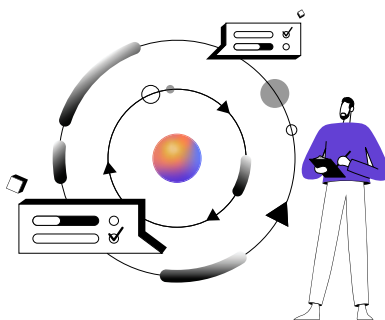

Customers have the freedom to direct and design their own tests while AttackIQ handles deployment and configuration. The service's adaptability enables rapid resource provisioning and eliminates the need for dedicated support staff. With the AttackIQ Adversary Research Team, organizations receive comprehensive security control validation and proactive identification of gaps. The solution includes cutting-edge adversary emulations and threat intelligence, enabling organizations to strengthen their security programs and achieve tangible business value.

The Value of AttackIQ Enterprise

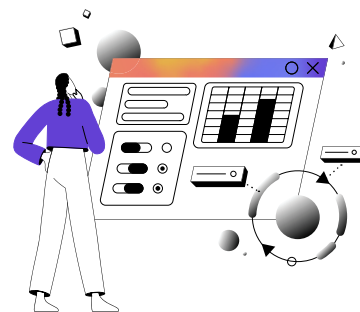

Close Security Control Gaps

Continuous security control validation from AttackIQ to proactively identify and address vulnerabilities, enabling seamless information sharing across teams.

Conserve Scarce Resources

AttackIQ Enterprise saves time and financial resources by enhancing security analyst and operations team performance, identifying control redundancies, validating security measures, and reducing breach impacts, resulting in substantial cost savings and improved performance.

Elevate Team Effectiveness

Leverage AttackIQ's cutting-edge adversary emulations and threat intelligence to improve team and technology operations, delivering tangible business value across various security aspects.

ABOUT ATTACKIQ

AttackIQ, the leading independent vendor of breach and attack simulation (BAS) solutions, built the industry's first BAS Platform for continuous security control validation and improving security program effectiveness and efficiency. AttackIQ is trusted by leading organizations worldwide to plan security improvements and verify that cyberdefenses work as expected, aligned with the MITRE ATT&CK framework. AttackIQ is passionate about giving back to the cybersecurity community through its free award-winning AttackIQ Academy and partnership with MITRE Engenuity's Center for Threat-Informed Defense.
