

Threat-INFORM Your Defense - A SOC Optimization Service

Threat-INFORM Your Defense helps organizations assess how Threat-Informed Defense (TID) is applied today and translate those insights into measurable improvements using MITRE's INFORM maturity model. By grounding security decisions in real adversary behavior, the service helps organizations prioritize effort, reduce noise, and improve security effectiveness across the program.

Advance Threat-Informed Defense

AttackIQ Professional Services partners with you to apply TID in a practical, measurable way across people, processes, and technology. The engagement aligns security leaders around a shared understanding of current capability and supports systematic improvement over time.

Through the engagement, you will:

- Establish a shared understanding of current TID maturity
- Align security leaders on priorities, gaps, and improvement opportunities
- Define a prioritized improvement plan to guide execution and track progress

Service Description

The Threat-INFORM Your Defense Service teaches the principles of TID and uses the [INFORM](#) methodology to guide organizations through assessing current capability and developing improvement plans.

AttackIQ Professional Services delivers tailored training based on the organization's TID maturity. Following training, the team facilitates a structured tabletop exercise with security leaders to assess current capability. Together with the customer, AttackIQ Professional Services develops a prioritized improvement action plan and acts as a TID advisor as the organization advances.

Train: Foundational Knowledge Development

Training begins with a 3-hour workshop designed for diverse stakeholders across the security organization. The goal is to establish shared understanding and buy-in for TID.

Key topics include:

- Threat-Informed Defense Fundamentals
- MITRE ATT&CK overview and resources (optional, based on customer need)
- Deep Dive into the INFORM methodology
- Threat modeling with ATT&CK

Target participants include team leads, managers, and decision-makers who shape and drive their security practices. This workshop prepares leaders to operationalize TID and drive measurable improvements in their security programs.

Baseline: INFORM Tabletop Exercise

AttackIQ Professional Services facilitates a tabletop exercise using INFORM to build a baseline assessment for the security program. Bringing security leaders together with an independent facilitator is crucial to establishing a shared organizational view of current maturity and preparing the team to reassess progress over time.

Advance: Roadmap & Action Plan

AttackIQ Professional Services works in partnership with the customer to create a tailored TID improvement roadmap and action plan that defines near- and longer-term actions, ownership, and a cadence for reassessment.

Customer Outcomes

Upon completion of the Threat-INFORM Your Defense Service, you have:

1. A shared understanding of Threat-Informed Defense maturity across security leadership
2. A documented INFORM assessment capturing the current state and key gaps
3. A prioritized improvement plan with defined actions and ownership
4. A measurable framework for tracking progress as Threat-Informed Defense capabilities mature

Throughout the service engagement, you are guided by experienced advisors who support your organization's ongoing TID maturity.

Professional Services Expertise

AttackIQ is a founding Research Partner in MITRE's Center for Threat-Informed Defense and an active leader in advancing TID as a practice across the security community. In this role, AttackIQ collaborated with MITRE and global security teams to develop the INFORM maturity model.

AttackIQ Professional Services operators bring experience from government, intelligence, and commercial cybersecurity environments. The team applies proven implementation patterns and operational best practices, developed through years of customer engagement, to help organizations systematically advance their TID.

About AttackIQ

AttackIQ, the leading provider of Adversarial Exposure Validation (AEV) solutions, is trusted by top organizations worldwide to validate security controls in real time. By emulating real-world adversary behavior, AttackIQ closes the gap between knowing about a vulnerability and understanding its true risk. AttackIQ's AEV platform aligns with the Continuous Threat Exposure Management (CTEM) framework, enabling a structured, risk-based approach to ongoing security assessment and improvement.

The company is committed to supporting its MSSP partners with a Flexible Proactive Partner Program that provides turn-key solutions, empowering them to elevate client security. AttackIQ is passionate about giving back to the cybersecurity community through its free award-winning AttackIQ Academy and founding research partnership with MITRE Center for Threat-Informed Defense.
